Research Experience

2010-Pres. Postdoctoral Researcher, UC Irvine
Supervisors: Steven R. White and Kieron Burke

- Pioneered a method for parallelizing the density matrix renomalization group (DMRG) algorithm in real space.
- Performed state of the art simulations of model electronic structure systems, frustrated magnets, and topologically ordered nanowires.
- Co-developed an open source library for tensor product wavefunction algorithms. Website: http://itensor.org/

2005-2010 Graduate Research Assistant, UC Santa Barbara
Supervisor: Leon Balents

- Applied a variety of analytical methods (bosonization, mean-field theory, spin wave calculations, high temperature series) to study frustrated magnets
- Developed code based on the ALPS simulation library to implement a novel semi-classical algorithm for finite temperature quantum magnets
- Collaborated with Steven R. White on a new method for simulating finite temperature quantum systems (METTS algorithm).

Education

2010 PhD in Physics, UC Santa Barbara. Advisor: Leon Balents
2005 BS in Physics, Georgia Institute of Technology, highest honors
2005 BS in Mathematics, Georgia Institute of Technology, highest honors
